SVC-02 · SCRIPT SAMPLE

5 "Facts" Everyone Repeats That Are Wrong

A countdown script in a myth-vs-fact style for a general-knowledge YouTube channel. Every claim is numbered and checked against the source sheet at the end.

Format: countdown · myth vs fact | About 430 words | About 3 min 10 s | 12 claims · 7 sources

SAMPLE · AI-ASSISTED Written by ASTRALX Studio to show the service, not client work. AI helped draft and research; every claim was checked by a person against the sources below. Sources checked October 2026.

Script

00:00 – 00:18

Hook

You've probably said at least one of these this year. Five "facts" that sound true, get repeated everywhere, and fall apart the moment you check the source. We're counting down from five, and number one is the one almost everyone believes.

ON SCREEN "5 facts. 5 fails." Fast cuts of each myth's title card.

00:18 – 00:48

#5 Bulls hate red

Number five: bulls charge because they hate red. Bulls, like other cattle, are dichromatic. Their eyes have two kinds of colour receptors, not three, so red and green look much the same to them. C1 What sets a bull off is movement. In a 2007 MythBusters test, a moving blue flag drew a charge while a still red one didn't. C2 The matador waves the cape. That's the trigger.

B-ROLL Slow-motion cape swing. Split screen: full-colour view vs a two-colour view.

VERDICT: FALSE

00:48 – 01:26

#4 Goldfish forget in 3 seconds

Number four: a goldfish forgets everything in three seconds. Researchers at Plymouth University trained goldfish to push a lever for food. When the lever only worked for one hour a day, the fish learned to push it at the right time. C3 Fish experts say goldfish keep memories for at least three months. C4 And in another experiment, fish trained to link a sound with feeding were released into the open sea, and the sound still brought them back. C5 The goldfish remembers. We're the ones who forgot to check.

B-ROLL Goldfish nudging a lever. A clock face ticking past one hour.

VERDICT: FALSE

01:26 – 01:48

#3 Lightning never strikes twice

Number three: lightning never strikes the same place twice. The US National Weather Service says the opposite. Lightning often strikes the same place repeatedly, especially tall, pointed, isolated objects. The Empire State Building is hit an average of 23 times a year. C6 If anything, lightning has favourite spots.

ON SCREEN Counter ticking to "23 strikes a year" over a skyline at night.

VERDICT: FALSE

01:48 – 02:27

#2 Great Wall from space

Number two: you can see the Great Wall of China from space. The wall is long, about 4,500 miles, but it's built from stone and earth that blend into the land around it. C7 China's first astronaut, Yang Liwei, said he didn't see it from orbit in 2003. Former NASA astronaut Jeffrey Hoffman never saw it either. C8 A few astronauts say they spotted it from low orbit, but only with the sun low and casting long shadows. And Neil Armstrong said he couldn't make out any human-made structures from the Moon. C9

ON SCREEN Orbit view zooming toward northern China; label "visible: rarely".

VERDICT: MOSTLY FALSE

02:27 – 02:57

#1 We use 10% of our brains

And number one: we only use ten percent of our brains. Neurologist Barry Gordon of Johns Hopkins calls this myth "so wrong it is almost laughable." C10 Brain imaging shows most regions are active over a 24-hour day, even during sleep. C11 The brain is about three percent of body weight but uses about 20 percent of the body's energy. C12 An organ that costly isn't sitting 90 percent idle.

B-ROLL Brain scan lighting up region by region while someone pours coffee.

VERDICT: FALSE

02:57 – 03:10

Close

Five facts, five fails. Before you repeat the next one, check the source. Which of these did you believe the longest? Tell me in the comments.

ON SCREEN All five myths stamped with their verdicts. End screen.

Source sheet

Each numbered claim in the script, the source it was checked against, and how strong that

source is.

#	CLAIM AS SCRIPTED	STATUS	SOURCE
C1	Bulls are dichromatic and see red and green as similar shades	VERIFIED	Teyit fact-check (cites Britannica, NCBI)
C2	2007 MythBusters: moving blue flag drew a charge, still red flag did not	TV TEST, NOT A STUDY	Teyit fact-check, Ripley's
C3	Plymouth University goldfish learned to push a lever at the right hour	VERIFIED	BBC Wildlife (Discover Wildlife)
C4	Goldfish keep memories for at least three months	EXPERT CLAIM, STUDY NOT NAMED	BBC Wildlife (Discover Wildlife)
C5	Fish trained to a feeding sound returned to it after release into the open sea	VERIFIED	Practical Fishkeeping
C6	Lightning often strikes the same place; Empire State Building averages 23 strikes a year	VERIFIED	US National Weather Service
C7	The wall is about 4,500 miles long and blends into the land around it	VERIFIED	Scientific American
C8	Yang Liwei (2003) and Jeffrey Hoffman did not see it from orbit	VERIFIED	Scientific American
C9	Some astronauts saw it only in low sun; Armstrong saw no human-made structures from the Moon	VERIFIED	Scientific American
